

USMAN RASHID

usmanrashid.7865@gmail.com | linkedin.com/in/usman | github.com/usman

Education

Georgia Institute of Technology

Bachelor of Science in Computer Science — Intelligence & Systems/Architecture

Expected Graduation: Dec 2026

Atlanta, GA

Experience

Software Engineering Intern

UPS

May 2026 – Aug. 2026

Atlanta, GA

- Incoming SWE Intern working on enterprise-scale logistics and supply chain systems.

Software Development Engineer Intern — Backend Systems

GE Appliances, a Haier Company

Aug. 2025 – Dec. 2025

Louisville, KY

- Engineered real-time **data sync pipeline** between Oracle EBS and Salesforce using REST APIs, reducing latency from 24+ hours to under 5 minutes across 5,000+ customer records.
- Designed bi-directional REST API layer with **idempotent error handling and retry logic**, ensuring consistent state across distributed systems during partial failures.
- Maintained **zero-downtime deploys** for a production system, using incremental rollouts.

AI Engineering Intern — Data Pipelines & Automation

CohnReznick

June 2025 – Aug. 2025

Atlanta, GA

- Built **document parsing pipeline** using OCR and REST APIs to extract and validate structured data from 100+ page policy documents, reducing manual processing time by 60%.
- Designed **conditional transformation logic** in JSON to auto-classify and route compliance events across 7 NIST security rule categories with zero manual intervention.
- Designed SQL schema and queries to track **compliance state history** and generate audit reports across 200+ policies, enabling point-in-time lookups.

Software Development Engineer Intern

Ansari Health Clinic

June 2024 – Aug. 2024

Atlanta, GA

- Designed **normalized MySQL schema** (8+ tables) with indexing and query tuning, improving read performance by 50% under concurrent load.
- Built RESTful backend in Node.js with **role-based access control** enforced at the API layer and transactional writes supporting real-time scheduling across 500+ records.

Projects

Manufacturing Event Pipeline | Python, FastAPI, Redis, Docker, Kubernetes

Dec. 2025

- Built **distributed task queue** using Redis and containerized FastAPI workers to process high-throughput appliance sensor events; designed for horizontal scalability from the ground up.
- Configured **Horizontal Pod Autoscaling** on queue depth metrics, enabling the system to absorb 10x event spikes without dropped messages or manual intervention.
- Wrote Helm charts and Kubernetes manifests with **liveness/readiness probes, rolling updates, and structured logging** to support zero-downtime deploys across dev and staging environments.

Distributed LLM Inference Service | Python, FastAPI, Docker, Pinecone, LangChain

Sep. 2025

- Built **query routing layer** using OpenAI function calling to dispatch between direct inference, RAG retrieval, and external API calls based on request classification.
- Containerized service with Docker and exposed via **FastAPI**, achieving sub-200ms p95 latency with vector search over embedded technical documentation in Pinecone.

Distributed Supply Chain Optimizer | Python, scikit-learn, Streamlit, Folium

June 2024

- Built maritime shipping route analysis dashboard with Streamlit, with Random Forest efficiency model trained on 1,000 synthetic shipping records with live weather forecasts via OpenWeatherMap and logistics news via NewsAPI.

Technical Skills

Languages: Python, Java, JavaScript, TypeScript, C/C++, SQL, Bash

Frameworks & Libraries: FastAPI, Flask, Node.js, React, LangChain, Pandas, NumPy, Scikit-Learn

Distributed Systems: Redis, task queues, event-driven architecture, REST API design

Cloud & Infrastructure: AWS (Lambda, EC2), Docker, Kubernetes, Helm, CI/CD, Git/GitHub

Tools: OpenAI API, Pinecone, Postman, MySQL, Supabase
